

Station 4 (and 5): What's in the water?

This sample was taken from the water by Monahan's dock.

1. Based on the number of plankton seen under the scope, how many microorganisms would you swallow in a mouthful of seawater?
2. Sketch out some of the organisms you see. Details will be tough to see, because many of them are quick. Help visualization by adjusting the light and focus regularly.

Station 6: Clam larvae

Many larval nekton (meroplankton) don't quite resemble their adult selves.

1. What do larval clams have in common with their adult selves?
